2. Top 4–5 Sources Analysis

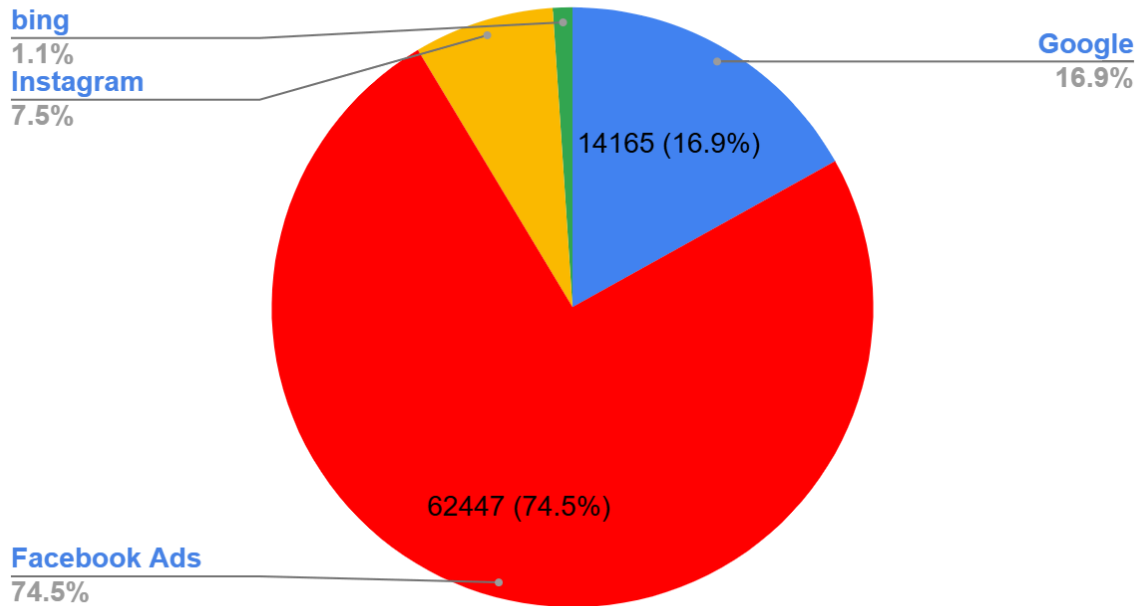

Source:	Top Landing Page..traffic to	Pageview	Bounce Rate:	Conversion Rate:	Notes:
Google	/	14165	42.25%	1.24%	Google sent higher traffic (14165) the direct homepage, the bounce rate is 42.45%, higher conversion rate.
Facebook Ads	/products/dwellings-of-eldervale-standard-edition-element	62447	94.27%	0.07%	Facebook sent the highest traffic(62447) to the product pages, however, higher bounce rate (94.27%) and lowest conversion(0.07%). It reveals visitors don't stay in the page long.
Instagram	/products/dwellings-of-eldervale-standard-edition-element	6320	86.97%	0.08%	Instagram sent the higher traffic (6320) to the product pages, however, higher bounce rate (86.97%) and lowest conversion(0.08%). It reveals the visitors left the page quickly.
bing	/	881	37.61%	2.29%	Bing sent the highest traffic is 881. Although the traffic is less than Instagram and Facebook, however, it brings higher conversion rate and lower bounce rate. It reveals the visitors coming from making the purchase and staying longer in the pages.

 *Optional Visual:* Pie chart showing **Share of Traffic by Source** or bar chart for **Conversion Rates by Source**.

Top 4 Source Conversion Rate

Top 4 Source's highest traffic Share

3. Key Insights + Next Actions

Top Wins (Source–Page Combos that Work)

- **Bing → high traffic (881) → high conversion**
- Bing sent the highest traffic is 881. Although the traffic is less than Instagram and Facebook, however, it brings higher conversion rate and lower bounce rate. It reveals the visitors coming from making the purchase and staying longer in the pages.
- **Google → high traffic → high conversion**
- Google sent higher traffic (14165) the direct homepage, the bounce rate is 42.45%, higher conversion rate.
- **Action: Increase SEO/ads for Bing and Google**

Mismatches (High Traffic, Low Conversions)

- **Facebooks → Product Page dwellings-of-eldervale-standard-edition-element**
 - Lots of traffic , weak conversion.

Facebook sent the highest traffic(62447) to the product pages, however, higher bounce rate (94.27%) and lowest conversion(0.07%). It reveals visitors don't stay in the page long.

- **Action: Fix the landing page or change targeting.**

4. Visitor behavior

1. Top Channels → Which channels bring the most engaged users.

1. Paid search bring the most engaged users to come

2. Audience & User Type Insights → How new vs returning users and All Users behave. New and returning users have high avg engagement time and engaged sessions. It reveals they are interested in exploring the products and spend time clicking details and digging deeper.
3. Geography & Engagement Patterns → Highlight high-performing regions or hidden opportunities.

The US has the highest active user , but there are potential high engagement sessions in Finland,Afghanistan,Bangladesh since they have a high engagement rate.

4. Key Insights (3–5 points) → Include wins, mismatches, and areas to optimize.

Paid search channels are the biggest wins, it reveals most visitors have high engagement , we spend more budget on camping this next year. In Geography data, I observe it has potential high engagement sessions in small countries including Finland,Afghanistan, Bangladesh,etc. They have a high engagement rate, but less active users. It reveals we can put the budget to develop these hidden opportunities in these regions. Direct channel(coming from the homepage) reveals lowest average engagement time and engaged session. It means hidden risk, It may be a conversation issue or returning users got used to the websites and don't need to spend more time exploring the website. I think we need to update the homepage and keep retention for users.

Visitor Behavior Story:

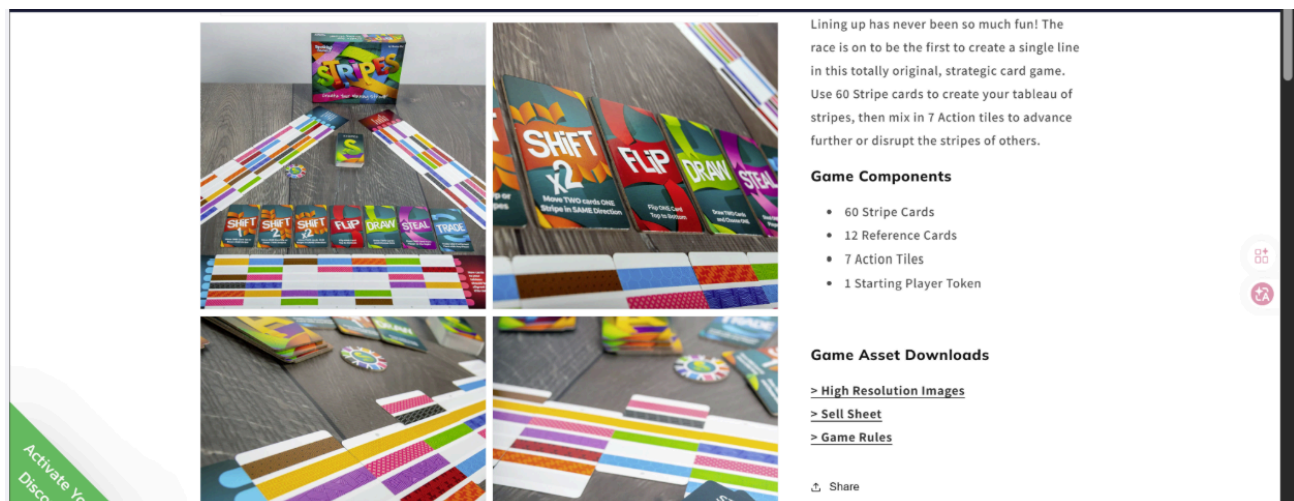

My site attracts visitors primarily through Paid search, but the direct channel(Homepage) is sending unengaged traffic that needs fixing. New users are more engaged, which tells me my site is better at building first impressions for the new users.. I discovered that the majority audience from new users is highly engaged, representing an untapped opportunity. Geographically, Finland,Afghanistan, Bangladesh shows potential for expansion or optimization. Based on this analysis, my next three priorities are: We will spend more money on camping paid search next year.I observe it has potential high engagement sessions in small countries including Finland,Afghanistan, Bangladesh,etc. They have a high engagement rate, but less active users. It reveals we can put the budget to develop these hidden opportunities in these regions. Direct channel(coming from the homepage) reveals lowest average engagement time and engaged session. It means hidden risk, I think we need to update the homepage and keep retention for users.

5. Weak Landing Page Fixes:

Landing Page Path	Pageviews	Bounce Rate	Conversion Rate	Pageviews per Session
/pages/were-doomed-how-to-play	1,606	90.96%	0.00%	1.16
/products/dwellings-of-eldervale-standard-edition-element	88,567	90.65%	0.18%	1.30
/products/stripes	773	87.89%	0.82%	1.59
/products/pocket-dungeon-quest	3,507	86.00%	0.49%	1.44

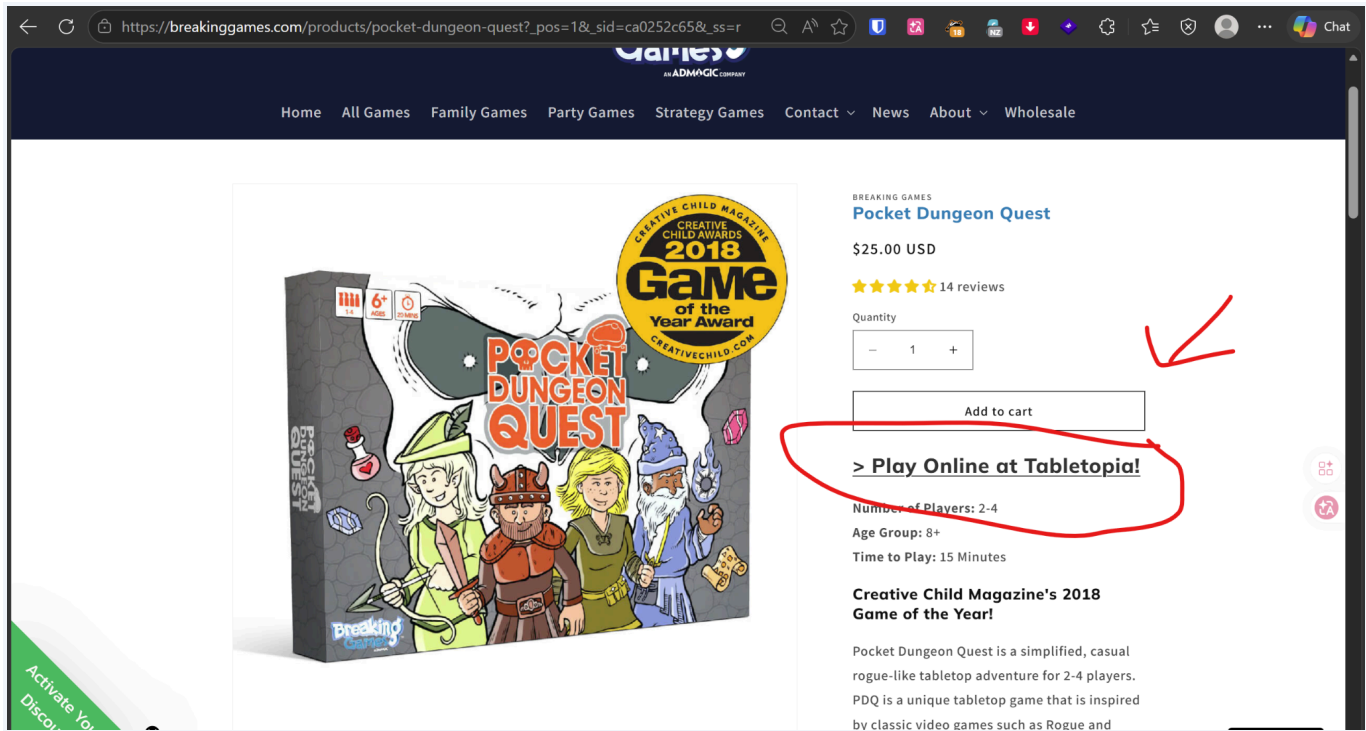

This page is so popular and has 88,567 pageviews, but highest bounce rate, no conversion rate. It reveals the visitors are looking for this game, but it sold out. We may consider to re-produce the product or creating a similar product. It reveals some customers still want these products. However, they can't buy it from the website. But I saw that the company has launched the second edition for this game.

This game product page has 773 pageviews. I checked the product page which has a release gamerule and a sell sheet to release to the audience. Some visitors may come to download it. That's the reason why the product has low conversion rate, but highest pageview. Try to change CTA - "Color in your life", change the CTA action key and increase the customer desire.

Name: Sok Leng Chan

This page is so popular and has 3,507 pageviews, but highest bounce rate, low conversion rate. I observed this product is so popular, it also has an online version. Most audiences like to play the online version and that's why it has a low conversion rate. Thus, I will suggest updating the CTA button and making it visible and visual. Emphasize the online version link, at the same time, add to cart button, change to CTA button. "Play in REAL" ← Check this out. It is a way to increase the conversion rate.

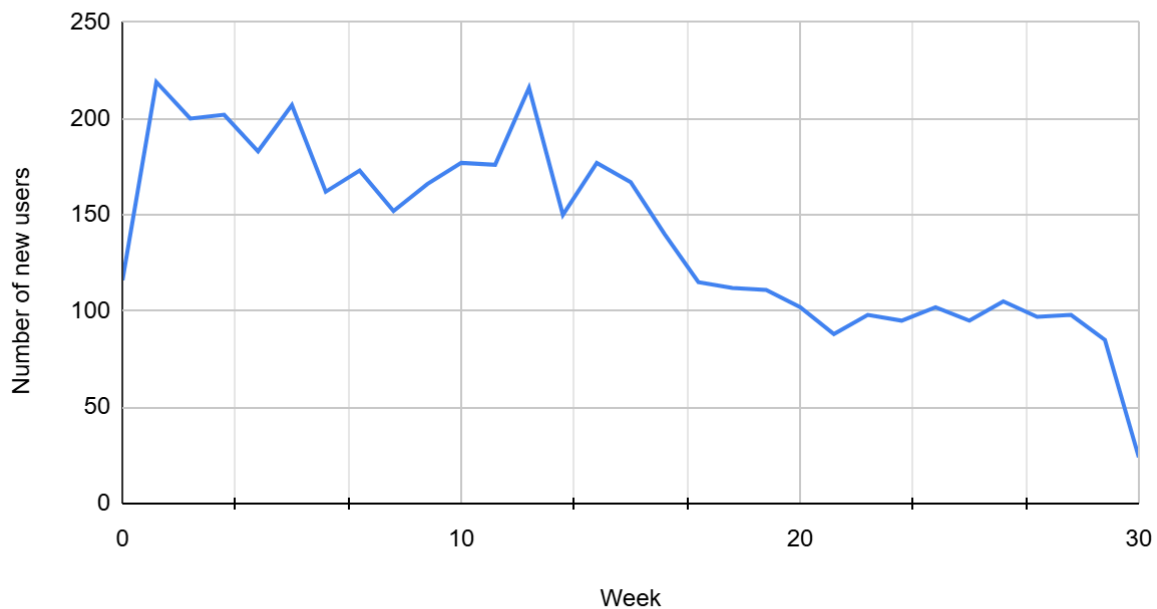

6. Advanced GA Insights.

For new users:

Wk 12 has spikes (highest) Wk 30 has dips (lowest), it reveals decline from Wk 13

Based on the data, it seems like new users are coming from Jan to May. We can launch new products and product ads in these months to attract more users, but it has declined since Nov. We can make discount bundles to attract more users to visit our site and increase conversion.

New users vs. Nth week

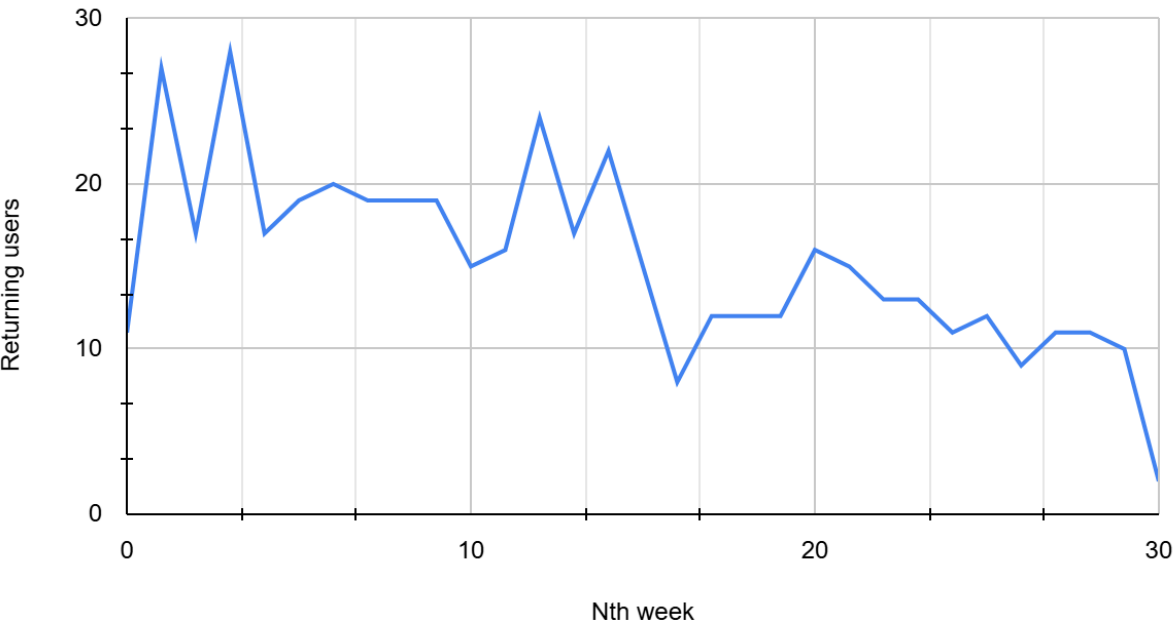

For returning users.

Wk3 and Wk 1 have spikes(highest), wk 30 has low. It reveals the decline after 15 wks

Based on the data, it seems like return users are coming from Jan to June. We can launch new products and product ads in these months to attract more users, but it has declined since Nov. We can make discount bundles to attract more users to visit our site and increase conversion.

Returning users vs. Nth week

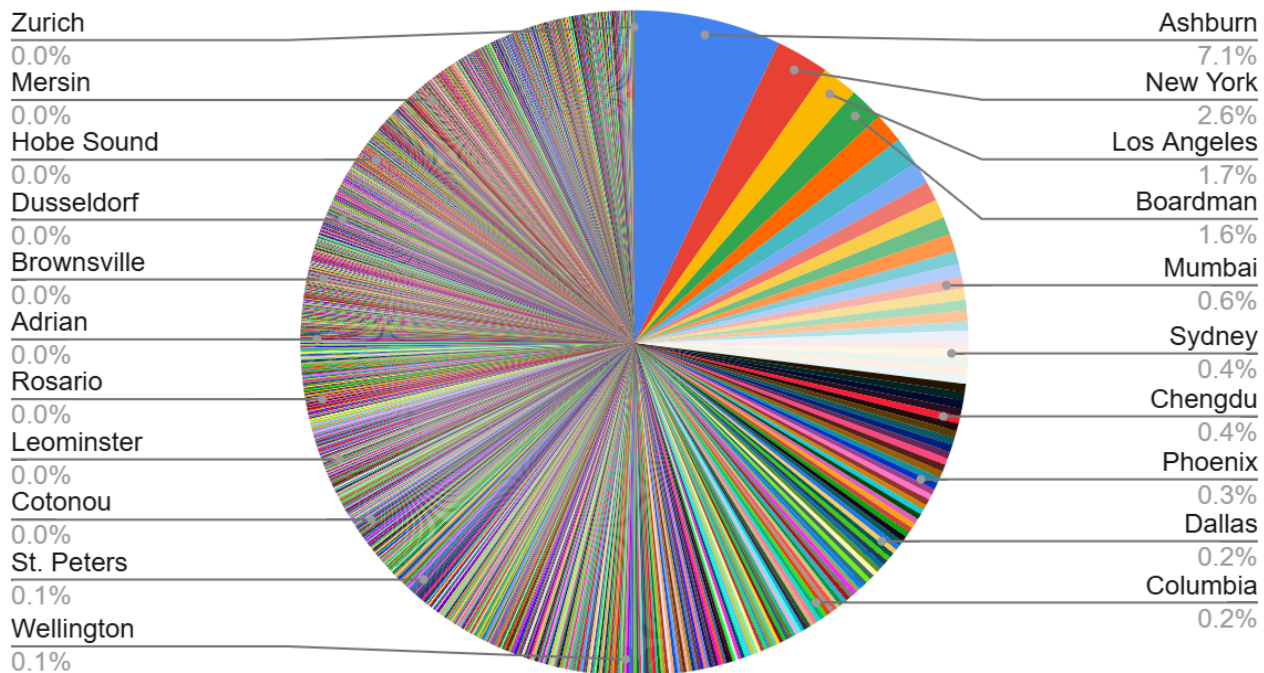

165	# How well do you retain your users?						
166	# Start date: 20250615						
167	# End date: 20250726						
168	Date	Week 0	Week 1	Week 2	Week 3	Week 4	Week 5

174	Jul 20 - Jul 26	85	-1	-1	-1		
175							

Are users coming back? Why/Why not? Note this down in the sheet itself.

The users are not coming back since breaking games sells board games, not subscriptions. The users often come back after months, so the data of retention reflect this situation.

Histogram of Active users

Step 3: Geographic Opportunity Analysis

What's surprising about this geographic mix for a US-based board game company?

The biggest share is coming from Ashburn. The second share is coming from New York. It reveals the Eastern coast is the main share market.

Tie it back to what you already know about country-level data from GA. Do you see trends such as certain US belts being more attractive markets than others?

Sun Belt as a Leading Market: The Sun Belt (including cities like Los Angeles, San Jose, Atlanta, and Houston) is the most attractive broad market belt with 259 active users. It shows a

Name: Sok Leng Chan

"distributed dynamic," where engagement is spread across several major metropolitan areas rather than being concentrated in just one or two.

Rust Belt Concentration: The Rust Belt (including Columbus, Chicago, and Philadelphia) is the second most active belt with 154 active users. However, its dynamic is more "centralized," with the vast majority of traffic coming from Columbus (62) and Chicago (45), while other cities like Detroit and Pittsburgh show significantly lower engagement.

Tech Hub Dominance: Locations categorized as Tech Hubs (specifically Ashburn, Boardman, Boydton, and Moses Lake) show the highest overall activity (416 active users). This is likely driven by data center traffic or B2B engagement, as these specific cities are major infrastructure hubs for cloud providers.

Analysis of US Belts and City Dynamics:

Sun Belt Diversity: The Sun Belt's attractiveness is bolstered by a diverse set of high-performing cities:

Los Angeles: 74 active users

San Jose: 36 active users

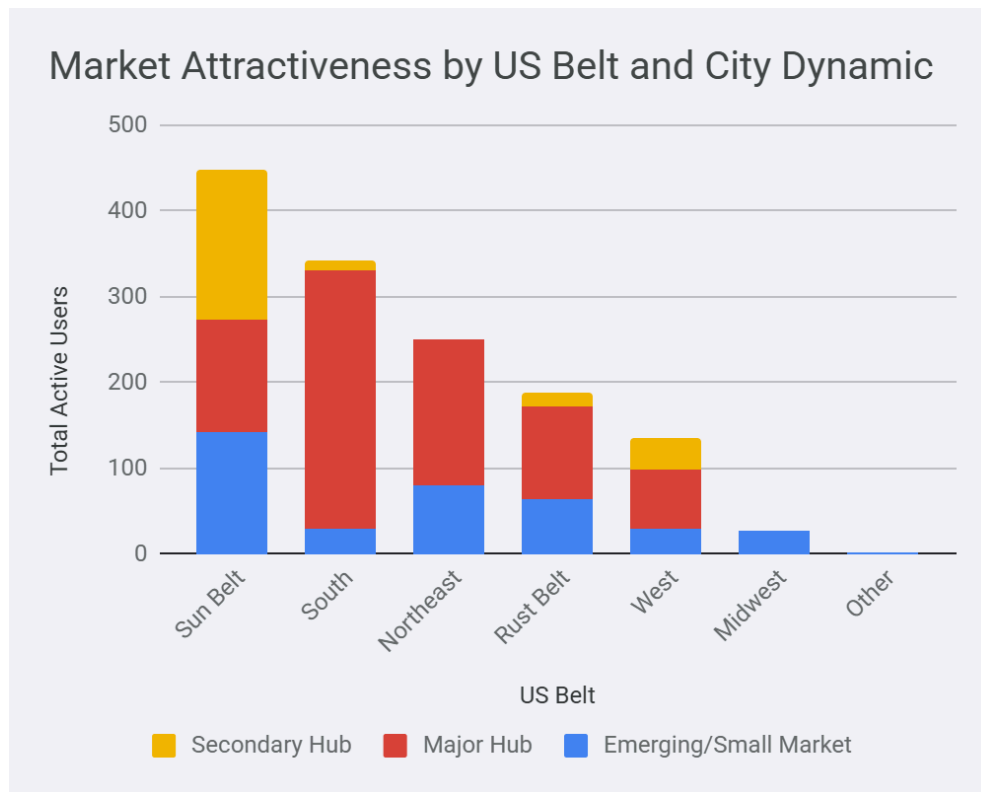

Atlanta: 22 active users

Houston: 19 active users

Frost Belt Performance: The Frost Belt (primarily New York and Boston) remains a strong market with 149 active users, nearly matching the Rust Belt. New York (109) is the single most active traditional consumer city in the entire dataset.

Emerging Tech Corridors: The high volume in cities like Ashburn (302) and Boardman (70) suggests that a significant portion of the "market" may be technical or infrastructure-related, which is a unique dynamic compared to traditional population-based markets.

The following charts illustrate the distribution of active users across these US belts and the specific city dynamics within the Sun Belt and Rust Belt.

Step 4: Referral Source Deep Dive

Beyond the top two sources with the biggest numbers, notice the *long tail* – those smaller sites sending tens, not hundreds or thousands, of visitors.

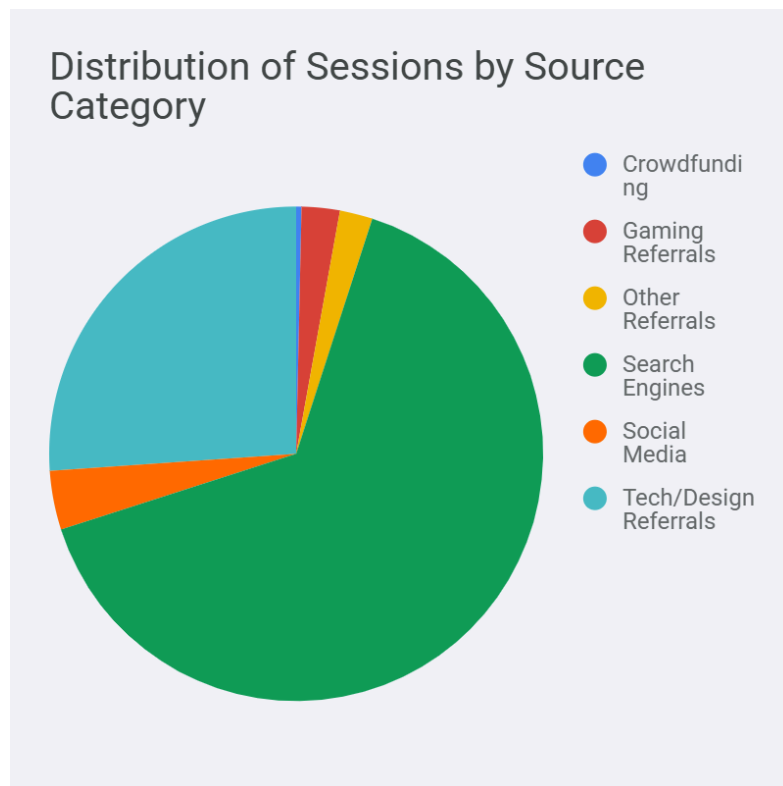

Ask yourself: *what kind of places are these? Are they blogs, forums, design resources, or community platforms?*

Search Engines are the Primary Driver: Organic search is your largest traffic source, with Google leading significantly (1,915 sessions). Other search engines like Baidu and Bing also contribute, though at much lower volumes.

Strong Tech & Design Referrals: A substantial amount of traffic originates from professional and technical platforms. Notably, expo.getbootstrap.com (573 sessions), webto.salesforce.com (136 sessions), and typewolf.com (103 sessions) are top referrers, suggesting your audience has a strong interest in web development and design.

Niche Community Engagement: You are receiving traffic from specific hobbyist and community sites such as printplaygames.com (69 sessions) and reddit.com (46 sessions), indicating successful reach within these specialized groups.

Emergence of AI Referrals: ChatGPT has become a measurable referral source (45 sessions), showing that users are discovering your site through AI-driven conversations.

2. Imagine you are the marketing manager. What's the first action you would take tomorrow based on the analysis?

I will add a budget for Bing and Google since they have a higher conversion and low bounces. It reveals the visitors stay on the pages and add products to cart. Both traffic is direct to the homepage. It reveals Homepage's navigation and interface are working well. Thus, Facebook has highest traffic, but lowest conversation. Their traffic direct to the product page. It reveals we need to fix the landing page or change targeting. The visitors didn't stay longer on that page and left quickly.

3. Share your visitor behavior story.

My site attracts visitors primarily through Paid search, but the direct channel(Hompage) is sending unengaged traffic that needs fixing. New users are more engaged, which tells me my site is better at building first impressions for the new users.. I discovered that the majority audience from new users is highly engaged, representing an untapped opportunity. Geographically, Finland, Afghanistan, Bangladesh shows potential for expansion or optimization. Based on this analysis, my next three priorities are: We will spend more money on camping paid search next year. I observe it has potential high engagement sessions in small countries including Finland, Afghanistan, Bangladesh, etc. They have a high engagement rate, but less active users. It reveals we can put the budget to develop these hidden opportunities in these regions. Direct channel(coming from the homepage) reveals lowest average engagement time and engaged session. It means hidden risk; I think we need to update the homepage and keep retention for users.

4. Imagine you could send a personalized welcome message to your top engaged users from one country. What would it say, and how would you encourage them to explore more?

Ready for your next move? Welcome to your ultimate board game destination. Whether you're a seasoned strategist or just browsing, explore our site to find exactly what you're looking for. Let the games begin!

5. If you were Online board Games' marketing manager, which insight from this dataset would you highlight in your next team meeting, and why?

I observed the Niche Community Engagement. It reveals a hidden potential market. printplaygames.com and reddit.com have discussions about our products. We can dig deeper into their discussion and develop their favorite board game trend or increase budget on this campaign to promote our products. It increases our conversion and engagement.
