

Google Ads Funnel Review

1. Executive Summary

(3–5 sentences. Big picture first)

- One-paragraph snapshot of what you learned about **overall account health**.
- Call out the **main opportunity** and the **biggest risk**.

Performance Max is domain spending, Conversion is lower than search. Highest spend, but lower conversion. It also reflects a very high impression, but really lower conversion. It reveals traffic doesn't turn to sales, but it has awareness to the people.

PMAX-breaking games have conversion value 21,900.93 , The cost is \$16,396.23 . ROAS is 1.335 (profitable). Although CPA is high, but ROAS is profitable, so it reveals that each conversion was spending still make the profitable, but i suggest to adjust the campaign ad since it bring high CPA, that means there are more traffic, but less interaction. It reveals people's less interest in exploring our product. It only brings awareness. We still need to think about how to turn this awareness to real value (sales).

2. Funnel Performance by Campaign

Campaign	Awareness (Impressions, CPM, CTR)	Consideration (Clicks, Conv. Rate, CPA)	Value (Conv. Value, ROAS)	Funnel Role	Recommendation
...	...	...	...	Traffic / Sales / Balanced	Scale / Optimize / Pause
PMAX-breaking games	2,619,933 (impression) CTR: 1.46% (interaction rate)	25,375 (clicks) 16396.23 (cost) 0.65 (CPC) 0.85% (conv.rate) 50.41(CPA)	1.335 (ROAS is profitable)	Traffic driver	It reveals this campaign brings high traffic, but less conversion.

Tips while filling:

- Use short bullet phrases inside the cells (e.g. “2.6M impr., \$6 CPM, CTR 1.4%”).

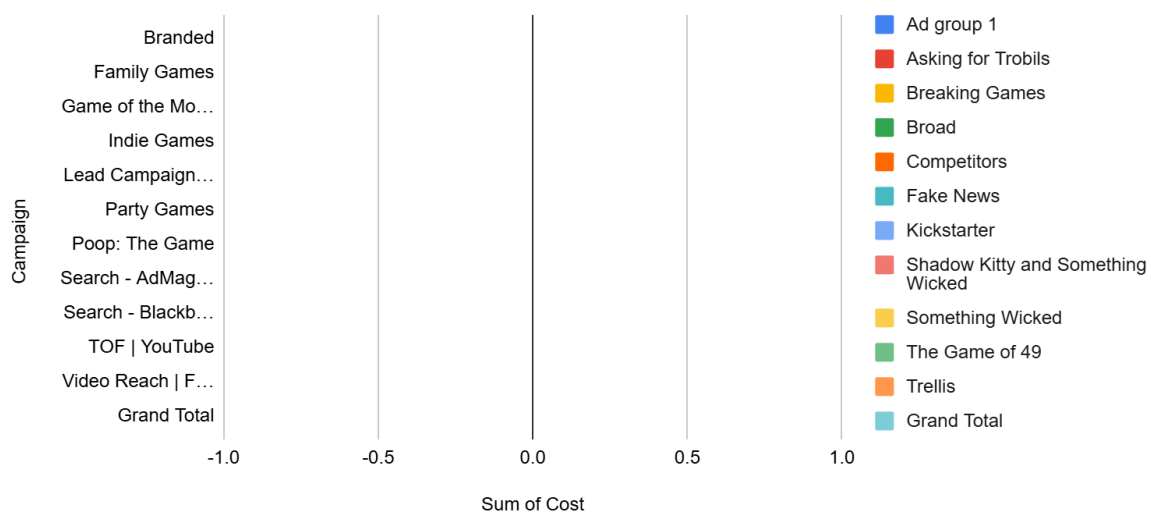

- In “Funnel Role,” classify as **Traffic Driver**, **Sales/Leads Driver**, or **Balanced Performer**.

3. Key Ad-Group Highlights

Campaign → Ad Group	Standout Metric(s)	Insight	Action
...	...	...	...

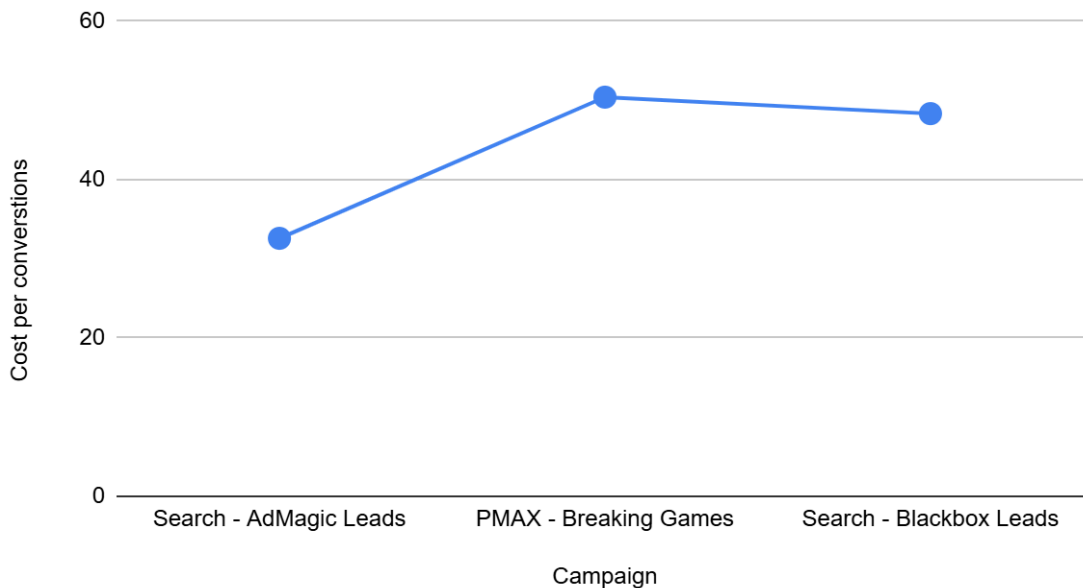

Focus on the ad groups that either dominate spend or outperform peers.

Stacked Bar Chart of Spend by Ad Group

Since Ad groups have no any conv.rate, click, cost, i can't analyze this one.

Cost vs Conversions per campaign

I can't find another campaign since there are three enabled campaigns. So I can only compare them. We can observe that PMAX- Breaking game is highest cost per conversation is \$ 50.41. It reveals even though this campaign brings the highest impression, but it brings higher cost from each bring each conversion. If we only want awareness, it is a winner, but bringing higher costs is not effective. We need to reconsider the ad idea and recreate ad campaigns to reach more conversion and lower CPA since if we compare with AdMagic and Blackbox lead, both have lower CPA than PMAX-breaking games.

4. Period-over-Period Comparison Insights

(from the Comparison dataset)

- Summarize 3-4 bullets:
 - **Cost vs Clicks:** where efficiency improved or declined.
 - **CPA or ROAS shifts** worth noting.

PMAX-breaking games have conversion value 21,900.93 , The cost is \$16,396.23 . ROAS is 1.335 (profitable). Although CPA is high, but ROAS is profitable, so it reveals that each conversion was spending still make the profitable, but i suggest to adjust the campaign ad since it bring high CPA, that means there are more traffic, but less interaction. It reveals people's less

interest in exploring our product. It only brings awareness. We still need to think about how to turn this awareness to real value (sales).

Performance Max has 2,619,933 impressions, but only has 1.46% interaction rate and 0.85% conversion rate. PMAx is fantastic for reach and cheap clicks, but less efficient at producing business results.

PMAx - Breaking Games cost \$16,432.61 and click 25,441, so cost per click is \$ 1.54, Previous year Cost \$14,996.15 and click 24,910 , so cost per click (previous year) is \$ 1.66. It reveals the cost per click (previous year) is slightly higher than this year. Is it an efficient click?
 $25,441 - 24,910 / 24,910 = 531 / 24,910 = 2.13\%$, Cost $16431.61 - 14996.15 / 14996.15 = 1435.46 / 14996.15 = 9.57\%$ However, we compared the cost rate and click rate. We spent 9.57%, but only 2.13% clicked. That means efficiency dropped, you're paying more per click.

5. Patterns & Themes

- Cross-campaign takeaways (e.g. "Search consistently delivers higher conversion rates than PMAx despite higher CPC").
- Any **structural issues** (naming, budget distribution, etc.).

6. 3–5 Actionable Recommendations

(Clear, prioritized list)

- Reallocate X% of budget from ___ to ___ because ...
- Pause/reshape campaign ___ because ...

Performance Max has 2,619,933 impressions, but only has 1.46% interaction rate and 0.85% conversion rate. PMAx is fantastic for reach and cheap clicks, but less efficient at producing business results.

I will suggest: create a new ad increase the sales because it reveals PMAx brings high traffic, we are successful in getting people' attention and awareness. The next step should be increasing the conversion and turning to real sales. I think creating a bundle and discount to increase the people' purchase is desired.

7. Supporting Visuals

(Paste the charts you built: Impressions vs CPM, Cost vs Conversions, Stacked Bar of Ad-group spend.) Add a one-line caption for each chart explaining the takeaway.

Meta Ads Funnel Review – Breaking Games

Executive Summary

(3–5 sentences. Big picture first — account health, main opportunity, biggest risk)

Funnel Performance by Campaign

Campaign	Awareness (Impr., CPM, CTR)	Consideration (Clicks, Conv. Rate, CPA)	Value (Conv. Value, ROAS)	Funnel Role Traffic / Sales / Balanced	Recommendation
*DA Traffic TOF	(impr) 2944482 (CPM)2.932567 (CTR) 1.404084	(Click) 44501 (CPC) 0.194038	(Result) 39419 (CPR) 0.21905401	Traffic driver	This campaign brings the highest traffic and highest conversion with lowest CPC. It is a winner for awareness.
DA Reach Retargeting	(impr) 1518347 (CPM)1.061905 (CTR)0.119933	(Click) 1821 (CPC) 0.885415	(Result) 1208484 (CPR) 1.33418399	Balanced and sales driver	This campaign brings the highest purchase with lower CPR, even though it doesn't have more clicks. It is the winner for sales drivers.

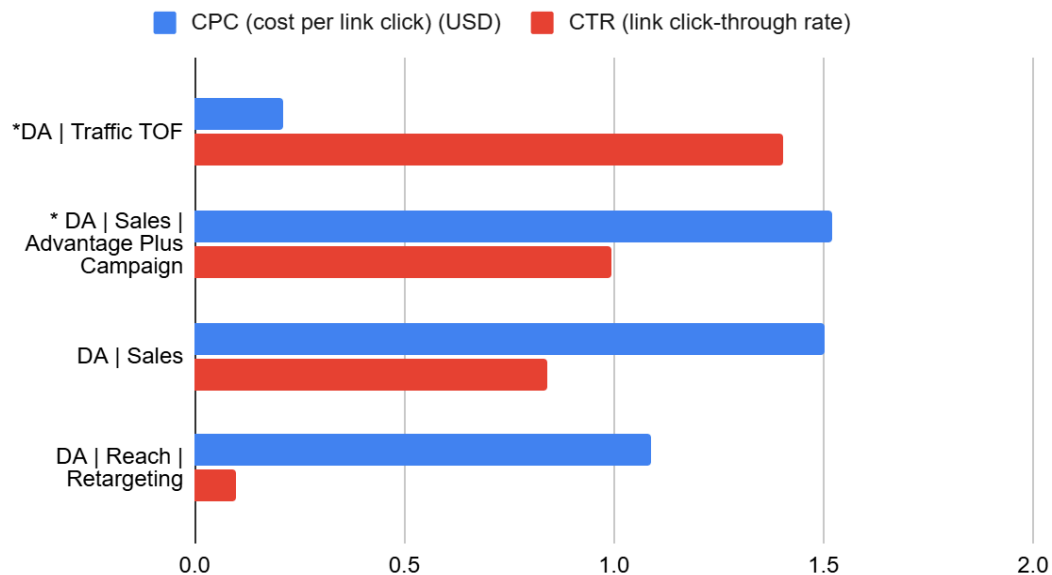

Tips:

- Use short bullet phrases inside the cells (e.g., “2.6M impr., \$6 CPM, CTR 1.4%”).
- In “Funnel Role,” classify as Traffic Driver, Sales/Leads Driver, or Balanced Performer.
- Recommendation: Scale / Optimize / Pause / Refresh.

Key Ad-Set Highlights

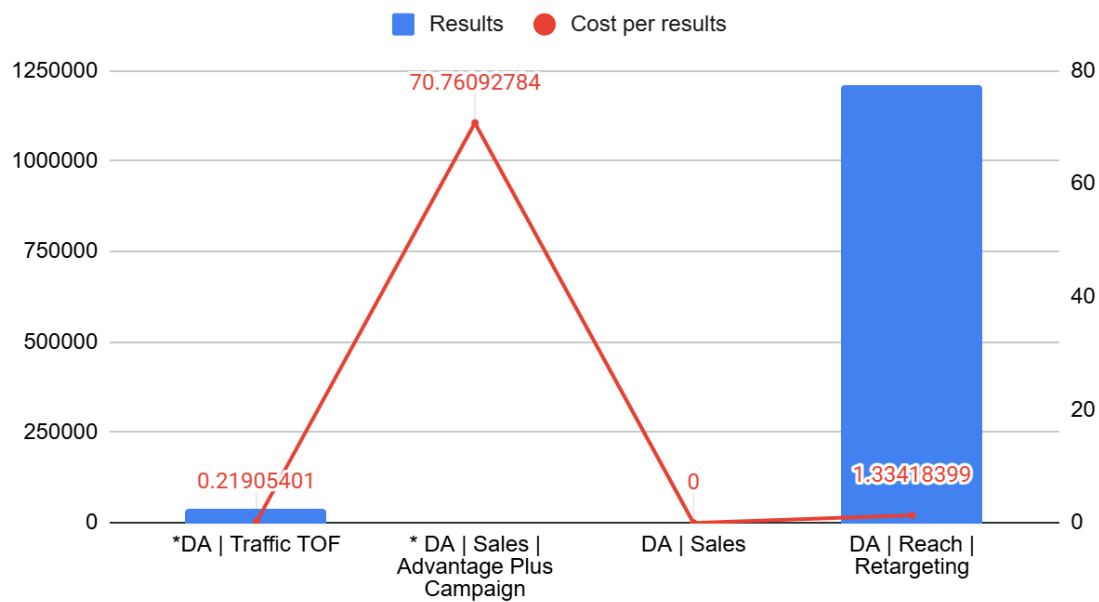

Ad-set	Attribution setting	Awareness (Impr., CPM, CTR)	Consideration (Clicks, Conv. Rate, CPA)	Value (Conv. Value)	Funnel Role Traffic / Sales / Balanced	Recommendation
Retargeting All Retargeting exclude 30 purchase	7-day click or 1-day view	(impr) 441790 (CPM)11.4 (CTR) 1.66	(Click) 7342 (CPC) 0.686306	(Result) 79 (CPR) 63.78	Traffic and sales(Balanced)	This ad set is balanced. It brings traffic and sales. It has highest impr with lower CPM, highest conversion (7342 click) highest purchase 79. It is the winner to bring traffic and sales.
Broad We're Doomed Test	7-day click or 1-day view	(impr) 38665 (CPM)19.27 (CTR) 2.61	(Click) 1011 (CPC) 0.737112	(Result) 5 (CPR) 149.044	Traffic	This ad set brings higher traffic with lower conversion. Lower purchase,
Retargeting We're Doomed Expansion	7-day click, 1-day view, or 1-day engaged-view	(impr) 2877 (CPM)35.63 (CTR) 1.63	(Click) 47 (CPC) 2.181064	(Result) 0 (CPR) 0	traffic	This ad set seems not worthy since it doesn't have a lot of traffic with highest CPM and lowest conversion

CTR vs. CPC by Campaign Ad

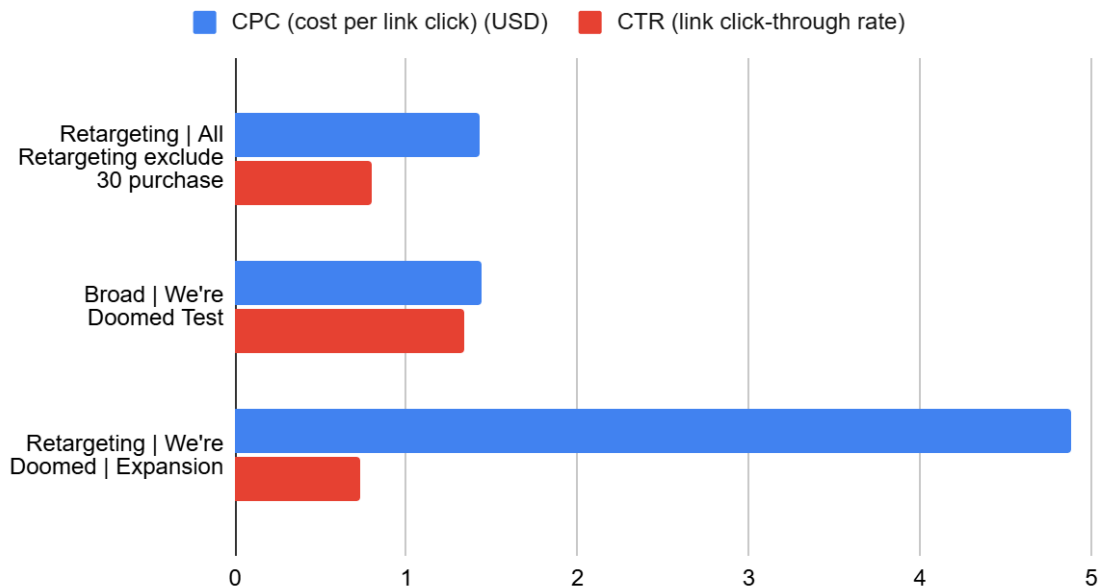

As we saw above column chart, DA | Reach | Retargeting has lowest CTR, however, it has higher CPC, but the reasonable cost \$ 1.088, DA | Traffic is totally different. It has the highest CTR (consideration/ click), however, it has lowest CPC \$ 0.20886. That means it is most successful to transfer awareness to consideration with lowest cost. It brings traffic to consideration. Based on this graph, I think we should allocate more budget for this campaign.

Purchases & Cost per Purchase by Campaign

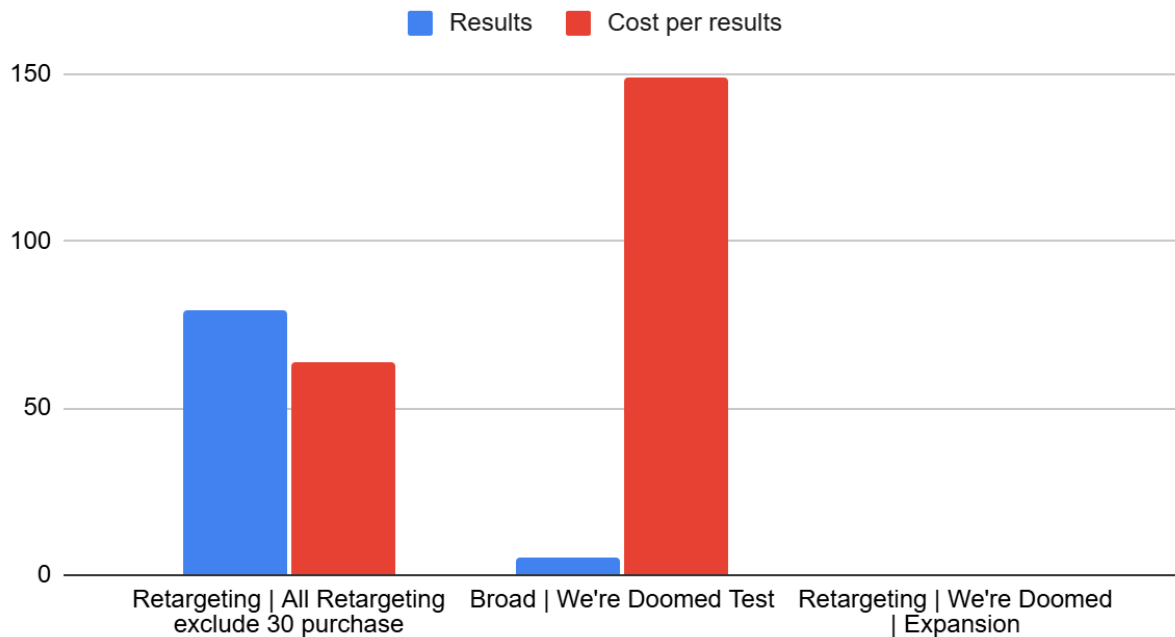

Now we saw this purchase & Cost per purchase by campaign, I observed DA | Reach | Retargeting has the highest checkout (purchase) with lower CPC, so even though we know it has lower CTR, it brings the highest purchase. It reveals this campaign really makes the consideration turn to real sales with lower CPR. It is the winner, it has lower CPR, highest purchase, Lower CTR and reasonable CPC.

CTR vs. CPC by Ad Set

Comparison of the ad set, we observed retargeting|We're Doomed has highest CPC \$ 4.88 , but lower CTR, so it reveals conversion is lower, we need to optimize this campaign or put the budget on another campaign instead of this one. Other two ad campaigns have very close CPC and CTR. Their CPC and CTR is normal and we can keep continuing these two campaigns.

Purchases & Cost per Purchase by Ad Set

However, After we reviewed purchases & Cost per purchase graph, we found Retargeting | All retargeting excluding 30 purchases is the winner and makes the real sales. This ad campaign is only have higher conversion, meanwhile, it make more purchase than Broad | We're Dommed Test. Board | We're Dommed Test has lower purchase, it also bring highest CPR (cost of result) \$ 149.044, so that means each purchase cost \$ 149. However, retargeting is only spending \$ 63.78. CPR of Board is double (2X) of Retargeting.

- Imagine you are the marketing manager. What is the first action you'd take tomorrow based on this analysis?

Now I observe the PMAx bring higher traffic, but lower conversion and real sales. Next step, we need to create a New AD to increase people's purchasing desires or re-planning the budget for PMAx. PMAx is great for traffic, but not for conversion and real sale. We still can put the budget on PMAx to continue to increase the awareness, thus, I also develop another AD campaign or organic campaign to increase conversion and sales. Or create search ad to increase conversion.

- Which campaign or ad group do you think is the superstar as per your analysis?

PMAx is good for bringing the high traffic, but the search brings the conversion. Based on the data, I can see "search ad" brings higher conversion, so I will use both. PMAx gets awareness, search increases conversion.

4. Imagine you are the marketing manager. What's the first action you will take tomorrow based on the analysis?

Retargeting | All Retargeting excludes 30 purchases - This ad set is balanced. It brings traffic and sales. It has highest impr with lower CPM, highest conversion (7342 click) highest purchase 79. It is the winner to bring traffic and sales. I would put more budget on this campaign since it can bring traffic and sales. It is really helpful for business growth.

5. Which campaign or ad group do you think is the superstar as per your analysis?

Retargeting | All Retargeting excluding 30 purchases is the superstar in this meta analysis. Highest traffic and highest sales with lower CPM and lower CPC.

6. Which channel should breaking games spend more money on? Explain in 100-150 words.

Based on the data and graph, I think breaking games should spend more money on Meta to bring more traffic and conversion, thus, google ads bring real sales and we can't ignore. Meta's data reveals ROAS is for views, not real sales, so I don't know whether it is profitable. In fact, Meta's campaign has an ad set to have real sales. It also drives the highest ROAS. I consider this factor, Meta has more value to develop traffic and real sales. We should allocate more budgets on Meta ads.

7. Imagine you are the marketing manager. What's the first action you'd take tomorrow based on the data analysis?

According to this data analysis, I suggest putting budgets on ads campaigns for age targets for 25–34 males with keywords "custom board game strategy" on prime time (evening time) to promote.
