

Q1. Describe your dashboard:

Meta Ads drive highest traffic and lowest conversion, need to retarget the ad campaign in order to increase the conversion. We should invest more budget to allocate on Google and Bing as the data provided Google Ads has high intent, but underinvested

Bing has 4.1% conv. rate. Paid search sessions engage better (60.2%). I will suggest putting 1000 to 2000 to Ad campaigns on Google Ads and Bing.

Q2. What insights from AI surprised or challenged your initial thinking?

AI suggested simplifying the mobile checkout flow surprised me since I didn't notice this point. I recognized the checkout flow needed to improve, but I didn't know it was coming from mobile. An AI analyst helped me connect the dots. In addition, UTM is a new term for me. I didn't know that UTM tracking can connect all ad data and can find the real attribution.

Q3. Did you find any recommendations that aligned with your own reasoning?

For meta retargeting ad campaigns, I have the same page with AI analysis since Meta has high traffic, but lower conversion. How to convert the traffic to the real sales, it needs to work out. Retargeting audience strategy aligned with my analysis and further marketing strategy.

Q4. How did you evaluate what was useful vs. generic?

I think AI analysis is very useful to help me think more widely for different views, in addition, they give me some points which I haven't noticed yet.
