

Google vs. Meta Ads: Channel Comparison & Recommendations

Include:

- 1. Your comparison table with key metrics.
- 2. The stacked chart screenshot.
- 3. A short paragraph on attribution differences and how they might skew results.
- 4. 3–5 actionable insights on how to allocate budget (e.g., “Shift 10–15% of budget to Meta for cheap traffic; maintain Google for high-ROAS retargeting”).

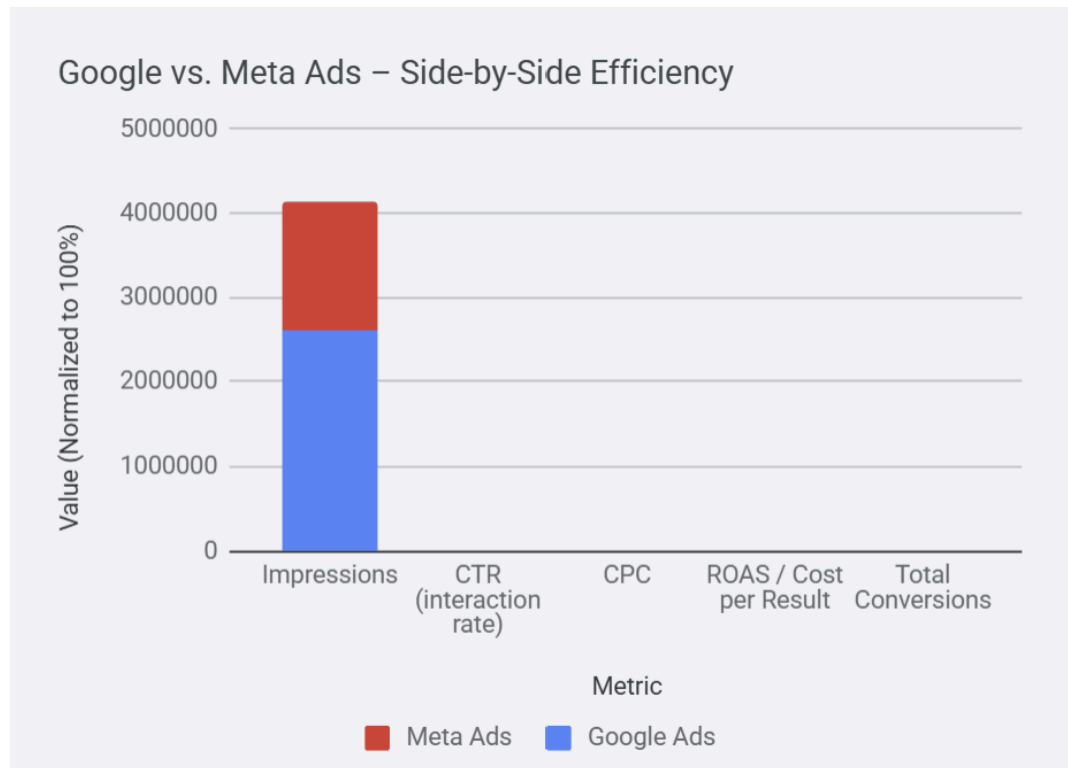

This task mirrors what real marketing analysts do: weigh two ad channels side-by-side, account for measurement differences, and recommend how to spend the next dollar.

Compare Key Metrics Across Platforms:

Now it’s time to line up Google Ads and Meta Ads side by side. Start simple: create a table with rows for impressions, CTR, CPC, ROAS/Cost per Result, and Total Conversions.

Metric	Google Ads (PMAx)	Meta Ads (DA Reach Retargeting)	Notes / Observations
Impressions	[2,619,933]	[1,518,347]	Google has highest Impression (Awareness)
CTR (interaction rate)	[1.46%]	[11.9%]	Meta has higher CTR (consideration)
CPC	[0.65]	[0.89]	Google has lower CPC with highest traffic
ROAS / Cost per Result	ROAS [\$1.335]	[\$ 749.52]	Meta has the highest turnout, but the attribution is view, not real sales.
Total Conversions	[325.24]	[1481]	Meta has higher conversion.

👉 This snapshot shows at a glance which channel is stronger at driving traffic (impressions/CTR/CPC) and which one is stronger at driving revenue (ROAS or Cost per Result).

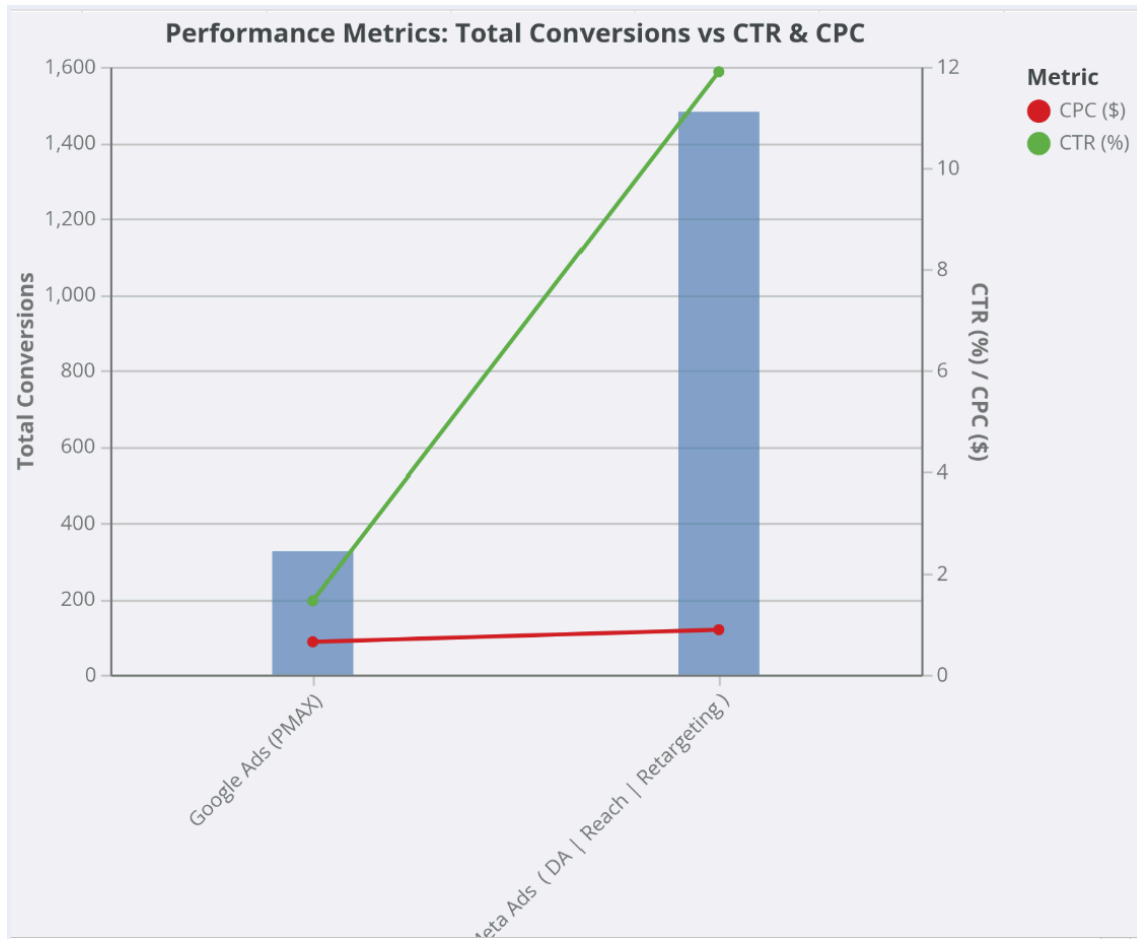

Data Summary:

The comparison reveals distinct strengths for each platform:

Impressions: Google Ads (PMax) leads significantly with over 2.6 million impressions compared to Meta's 1.5 million, driving higher brand awareness.

- CTR (Interaction Rate): Meta Ads shows much higher engagement with an 11.9% CTR, whereas Google Ads is at 1.46%.
- CPC: Google Ads is more cost-efficient for traffic with a lower CPC of \$0.65 compared to Meta's \$0.89.
- Conversions: Meta Ads generated a higher volume of conversions (1,481) compared to Google Ads (325.24).

The "ROAS / Cost per Result" metric appears to use different units for each platform (ROAS ratio for Google vs. Cost per Result for Meta), so the stacked comparison for that specific metric reflects the raw numerical difference rather than a direct efficiency ratio.

Key Performance Metrics:

- Total Conversions: Meta Ads significantly outperformed Google Ads with 1,481 conversions compared to 325.24.
- CTR (Click-Through Rate): Meta Ads also showed a much higher engagement rate at 11.9%, while Google Ads (PMax) had a CTR of 1.46%.
- CPC (Cost Per Click): Google Ads maintained a lower cost per click at \$0.65, whereas Meta Ads was slightly higher at \$0.89
- Where is traffic cheapest?

Google ads have lower CTR and CPC, it reveals that lower cost for traffic and conversion.

- Where is conversion strongest?

However, Meta ad has the highest conversion even though it's CTR and CPC are higher than google ads.

- Does one platform shine at top-of-funnel awareness, while the other wins at bottom-of-funnel sales?

Google has the highest impression and lower CTR, CPC. It can drive more traffic, however, Meta has the highest conversion. That means Meta's visitors have more interest in exploring our product. Thus, we can't determine who is the winner for sales. If we only determine by impression, CTR, CPC, we can say Google Ad is winner for awareness, Meta has more conversion, but google has real sale value, Meta attribution is view, not real purchase, so i can't use ROAS to determine who is winner. Meta definitely drives more conversion and it has a balance of traffic and conversion, but not real sales.

“Audience & Context Insights from Google Ads.”

In your working Google Doc, add a new section titled “Audience & Context Insights from Google Ads.”

- Paste in charts/screenshots from each dataset.
- Write your 4–5 sentence “audience + context profile” summary (the who/when/where/what story).
- Add your recommendations table (3–5 insights minimum).

By the end, you’ll be armed with insights that can guide your future campaign success, so treat it as such.

Audience + Context Profile Summary

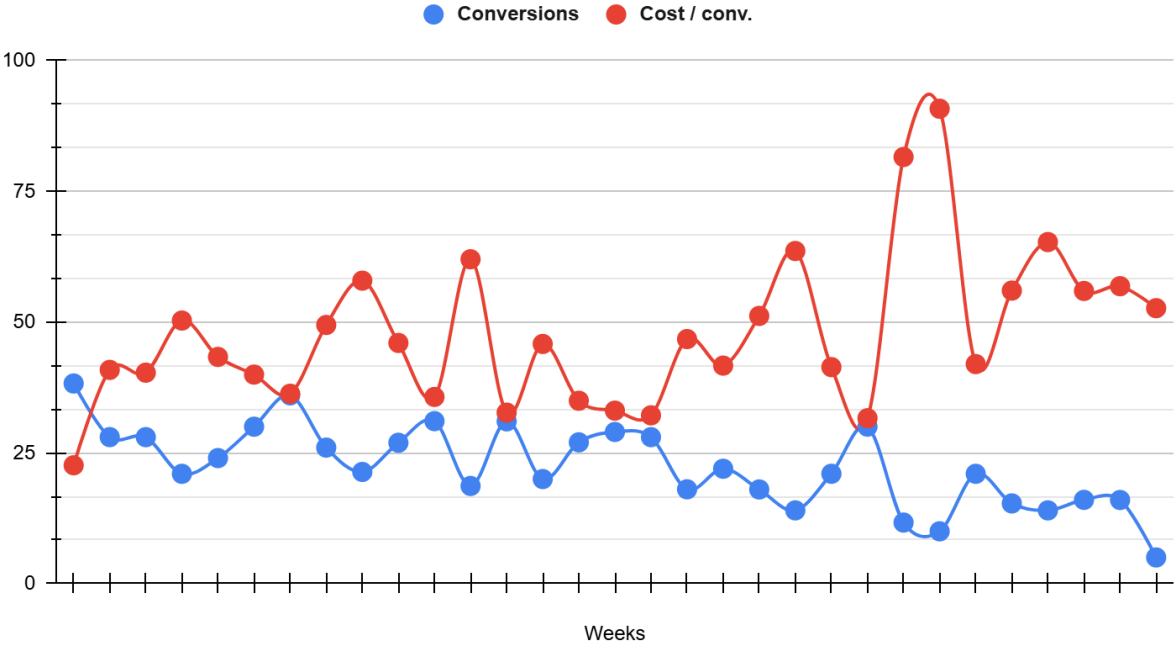

The core audience for Google Ads impressions is predominantly Male, specifically within the 25–34 age range. Users are most active in the evening after working hours, suggesting a high likelihood of mobile engagement, as mobile devices already account for nearly double the conversions compared to desktop. The primary interest driving high engagement (CTR/clicks) centers on "custom board game" related keywords, indicating a clear product demand trend. However, campaign efficiency is highly variable, evidenced by the week of June 16, 2025, which saw the highest CPA and lowest conversions.

Recommendations Table

Insight	Recommendation	Rationale
Mobile devices drive nearly 2X conversions.	Prioritize optimization of the mobile user experience (landing pages, checkout flow).	Maximize conversion rates since the majority of high-value engagement originates from mobile devices.
Impressions peak after working hours.	Shift ad scheduling budget to heavily favor the evening session.	Target users when they are most receptive and active to increase visibility and click-through rates.
Keywords like "custom board game" drive the highest clicks/CTR.	Focus future ad copy and content development on the "custom board game" trend.	Capitalize on high-intent search terms to drive more qualified traffic and conversion.

Insight	Recommendation	Rationale
The term "Kickstarter" is high-cost and low-return.	Implement negative keyword targeting for "Kickstarter" and reallocate budget to keywords like "custom" or "manufactures".	Reduce inefficient spending and increase budget efficiency by focusing on proven, lower-cost search terms.
The week of Jun 16, 2025, was highly inefficient (highest CPA).	Investigate and audit the campaign configuration and creative used during that specific week.	Identify and mitigate potential causes of inefficient spend, such as poor targeting or irrelevant ad copy.

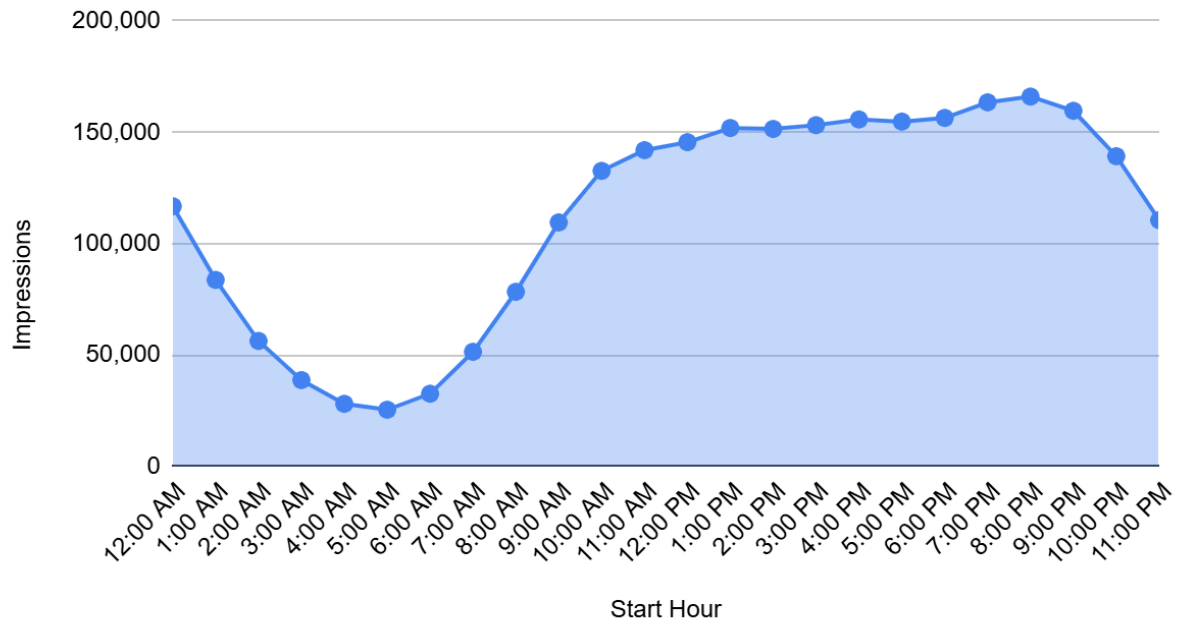

Conversion vs Cost/Conv in Weeks

Week of Jun 16, 2025	866	10	\$90.79	\$907.93
----------------------	-----	----	---------	----------

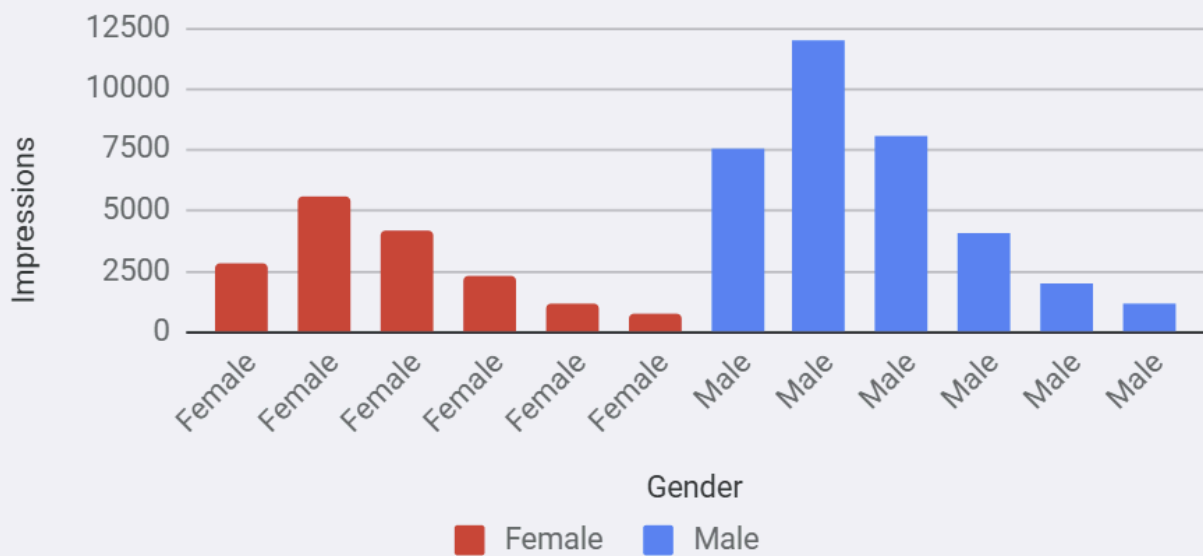

In the week of June 16, 2025. It reveals the highest cost per conversion(CPA) and lowest conversion. This indicates inefficient marketing spend where the cost to acquire a customer may exceed the profit they bring, often signaling a need for better targeting, and recreating the ads for this week.

Impressions vs. Start Hour

In this graph, it reveals more impressions after working time and less impressions in the midnight and morning session. We can put more effect on evening ad campaigns.

Impressions by Age Range and Gender

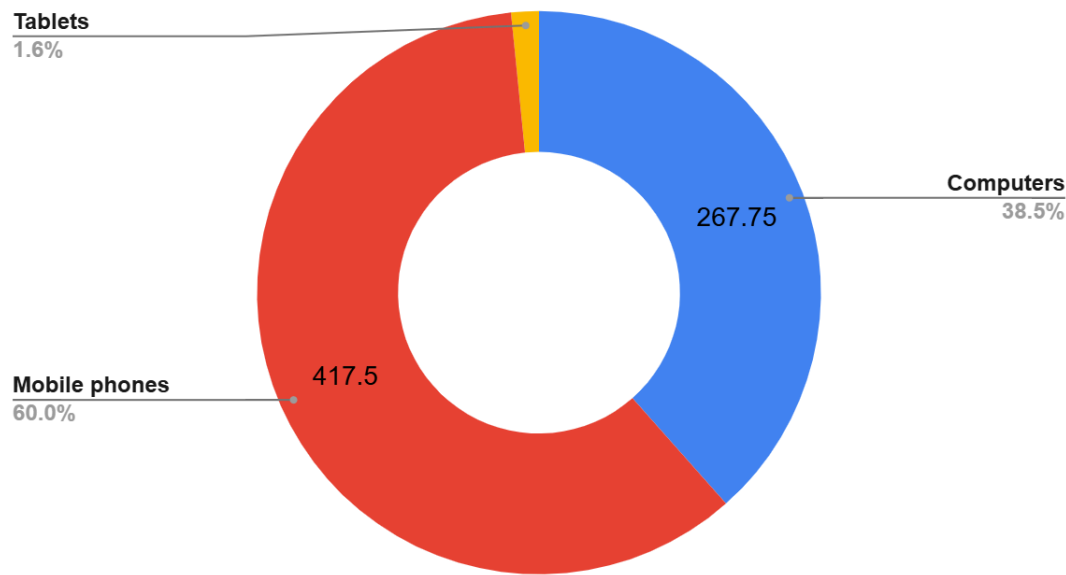

Based on the data, the group with the most impressions is **Male** in the **25-34** age range, with a total of **11,962** impressions.

Key Insights:

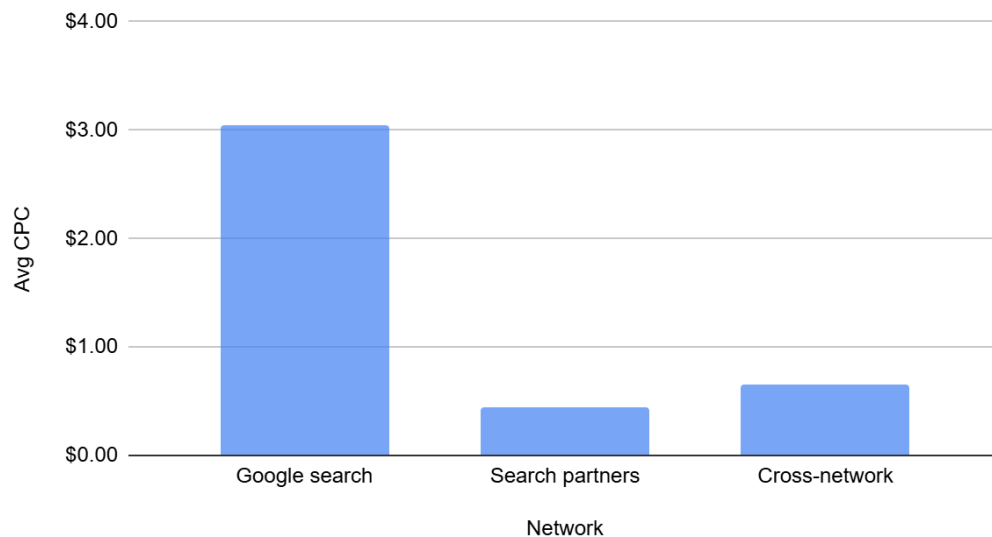

- Top Age Group: The 25-34 age range has the highest number of impressions for both genders compared to other age brackets.
- Gender Comparison: In every age range, the Male category significantly outperforms the Female category in terms of total impressions.
- Distribution: Impressions tend to peak in the young adult demographic (18-44) and gradually decrease as the age range increases.

The conversions of different devices

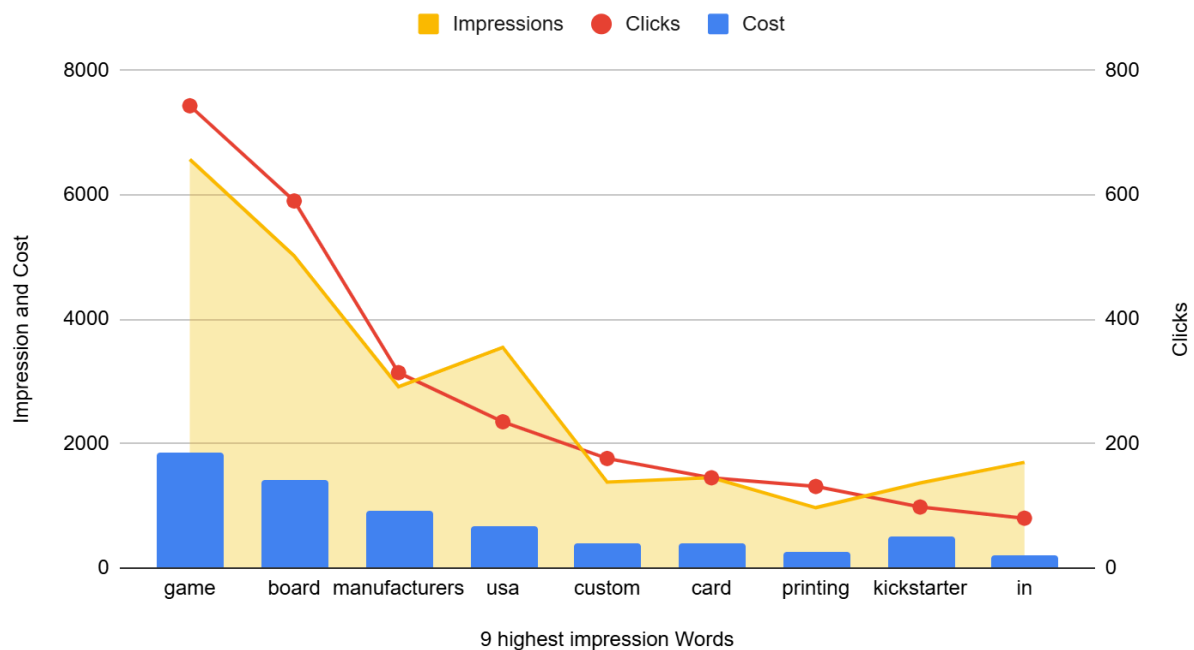

In this pie chart, Mobile devices have almost 2X more conversions than computers. It reveals most visitors like to use mobile devices to explore our products.

Avg CPC in the networks

In this bar chart, google search has dominated avg cpc. It reveals google search still has a huge effect to promote our products since most traffic comes from google search. Cross-network has lower avo cpc, we can put some budget to develop organic ad campaign in cross-network.

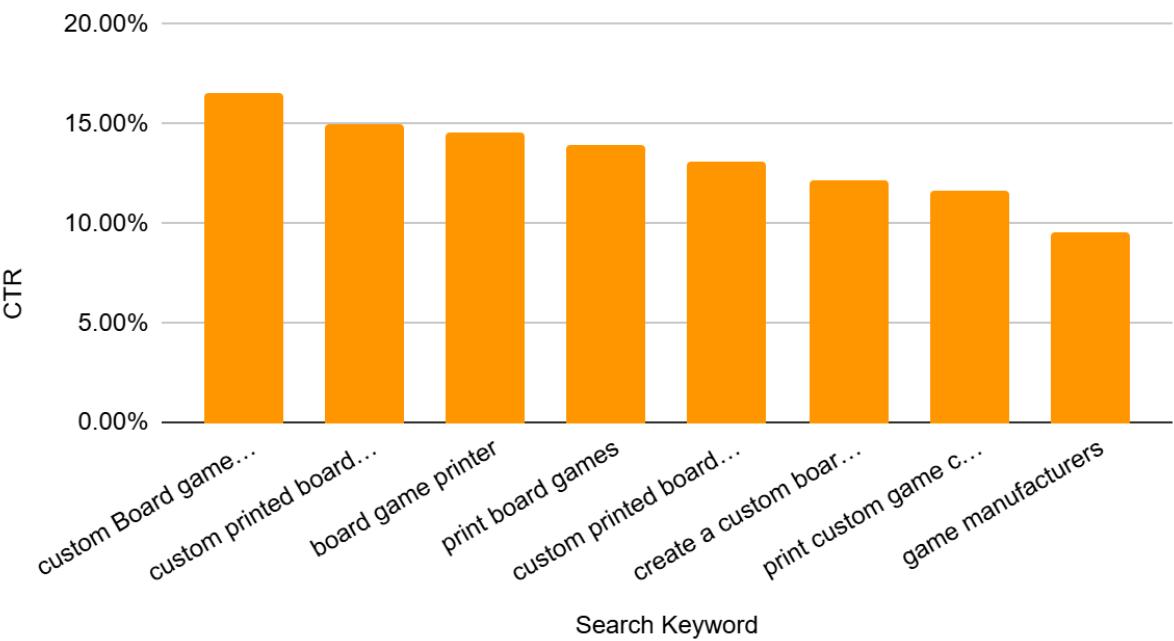

9 highest impressions Search word

In this combo chart, Board and game have the highest impression and clicks with highest cost. Thus, we need to pay attention to "Kickstarter". It has a high cost, but it doesn't reflect

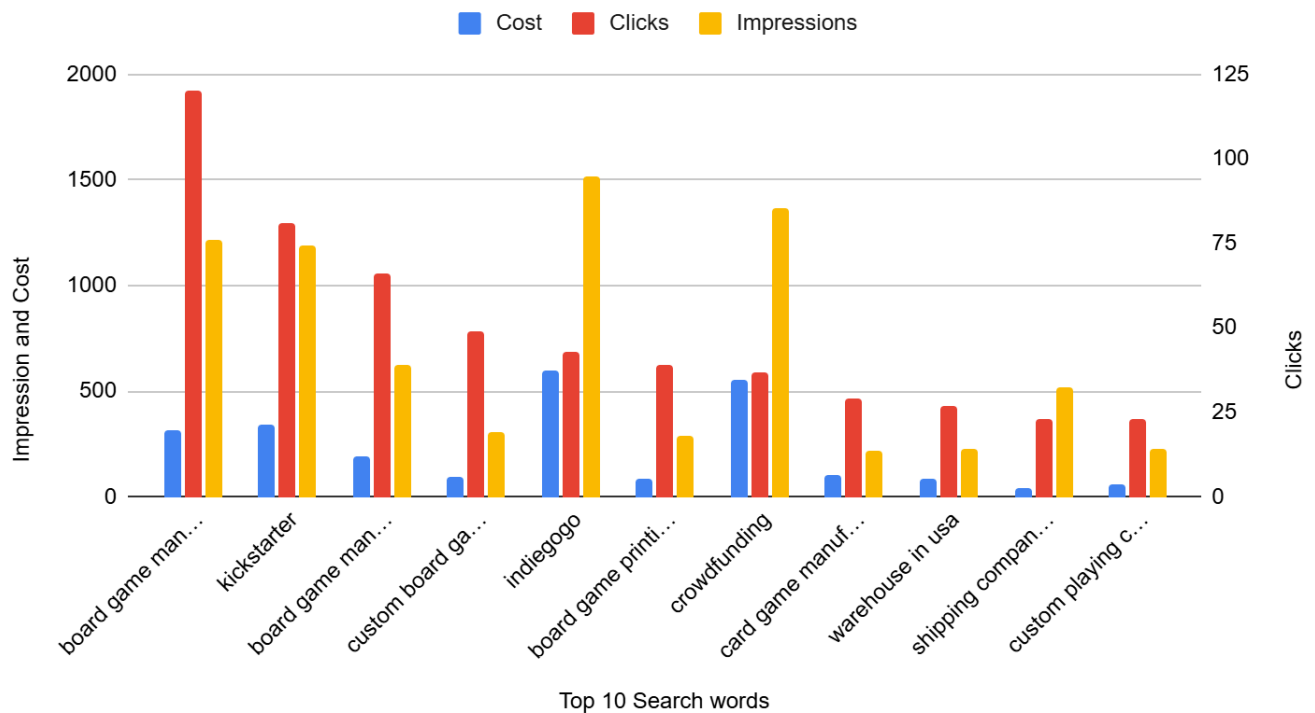

on impressions and clicks. I suggest not to waste money for this word and put the budget on other words such as “custom” or “manufactures”.

CTR vs. Search Keyword

In Search Keywords bar chart, custom board game and custom printed board game drive highest CTR. Top 10 Search Keywords have custom and board games, so now I know “custom board game” is the trend to develop our game and put this keyword on the future game ad campaign. It may drive more traffic and conversion, even real sales.

Top 10 Clicks Search Words - Cost and Impression

In this column chart, the highest clicks search Words have board game manufacture, custom board game, board game printing. As above 2 graphs, we can make game ad campaigns to these trends and put some keywords. For example: Custom board games, "Printable board game strategy",etc.

"Shopify Sales & Funnel Analysis"

Output

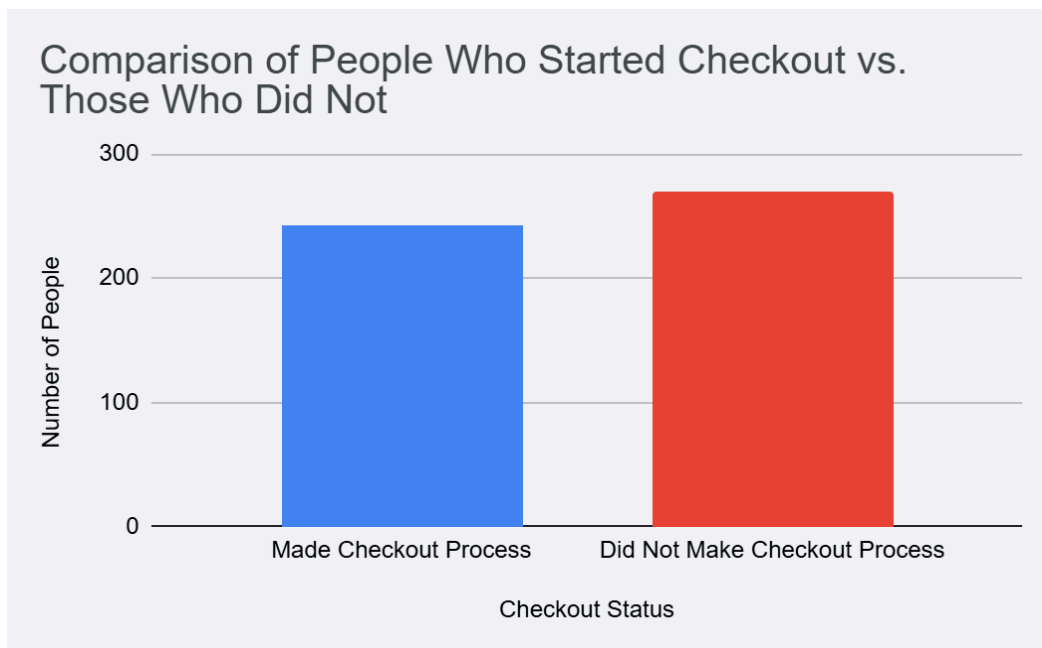

Along with the table, conclude your report with 2–3 short paragraphs that connect the dots:

- Summarize what's working (e.g., "AOV and hero product performance are strong").
- Pinpoint bottlenecks (e.g., "Checkout abandonment remains high").
- Give 2–3 actionable recommendations based on your findings (e.g., "Simplify checkout, test free shipping threshold, promote high-AOV bundles").

Goal: By the end, you should have a mini Shopify Funnel Report that connects checkout, sales, and customer behavior into one cohesive narrative — exactly how real brand analysts diagnose performance.

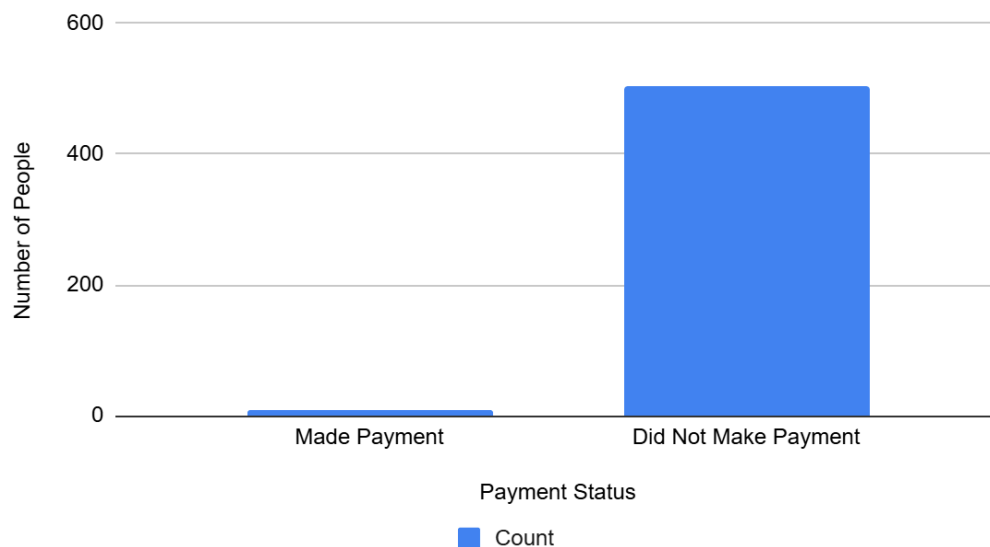

Step 3: Organize Your Report

In the same Google Doc you've been working on, add a new section titled:
"Shopify Sales & Funnel Analysis"

As I observed the check out process, there are 269 no checkout processes, and 242 checkout processes. The data is extracted from the blank of billing information. If the people didn't fill out the billing information, that means the people didn't plan to pay for the products. They stopped at the add-to-cart process. There are a lot of people who didn't make the checkout, so it may bring the issues that we need to be aware about the checkout interface, or whether discounts apply to increase the number of checkout, or shipping cost make the customers step back on their purchase.

Comparison of Reached Payment vs. Did Not Reach Payment

As I observed from the above diagram, it reveals there is a huge abandonment rate. It only has 8 people making the final payment, and has 503 stops at the reached payment process. Based on the data, it reveals a lot of customers stop at the reach payment step. It brings our attention on shipping cost, and checkout interface. Check whether shipping cost is too much to cause the dropping payment, Check whether the checkout interface is not running smoothly and make the customers stop at this step.

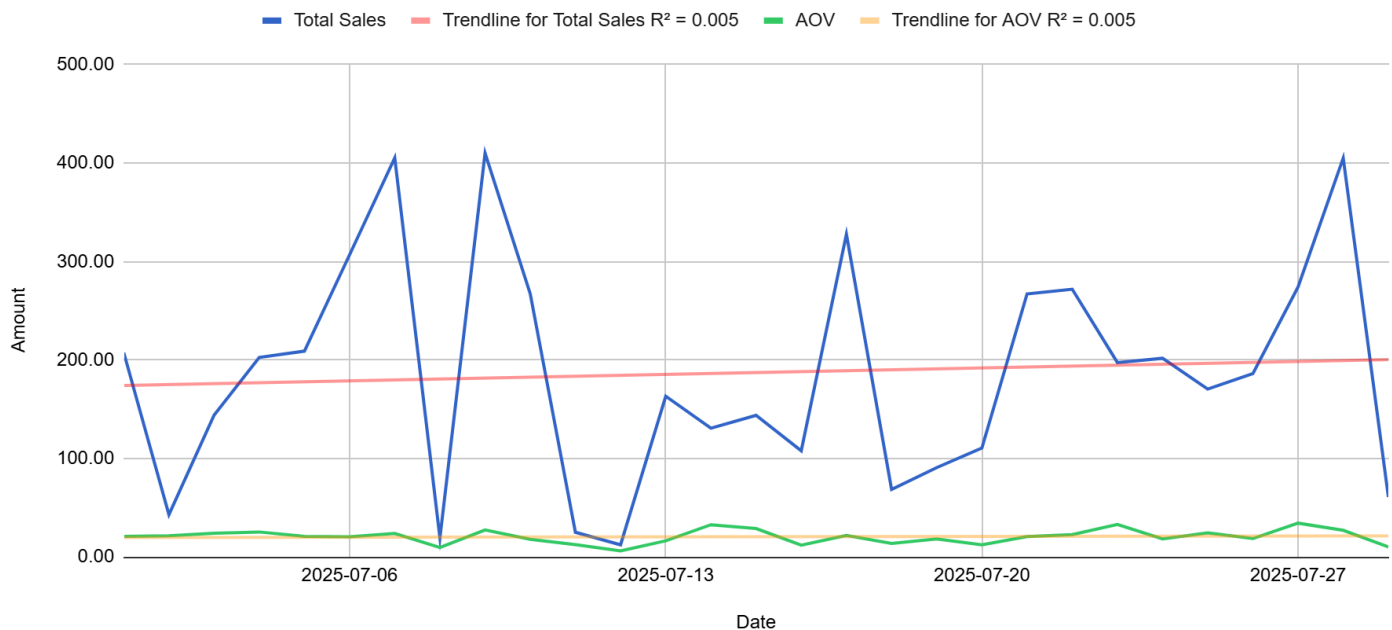

F11			
	A	B	C
1	New or returning customer	Customers	Customers (previous_year)
2	New	843	1618
3	Returning	129	230

As I observed, we have new customer 87% , but returning customer is only 13% of this year. Compared with previous year, new customer rate dropped 47% this year, return customer drop 44% .

Product title	SUM of Total sales
Dwellings of Eldervale 2nd Edition: Standard	13323.56
Dwellings of Eldervale - LEGENDARY Upgrade Kit	12514.05
Dwellings of Eldervale - DELUXE Upgrade Kit	5014.81
We're Doomed!	3810.47
Dwellings of Eldervale - Wooden Upgrade Treasure and	2586.22
The Big Box of Magic	1920.14
Dwellings of Eldervale - Exclusive Game Mat	1874.13
MIXTAPE	1733.39
Dwellings of Eldervale - Minotaur Mercenary Mini Expa	1370.38
Dwellings of Eldervale - Shapeshifter Mercenary Mini E	1361.17
Expancity Family Strategy City Building Game 2-4 Pl	1272.8
Dwellings of Eldervale - Oracle Hex Tile	1269.99
We're Doomed: Meritocracy Expansion Pack Party Ga	933.33

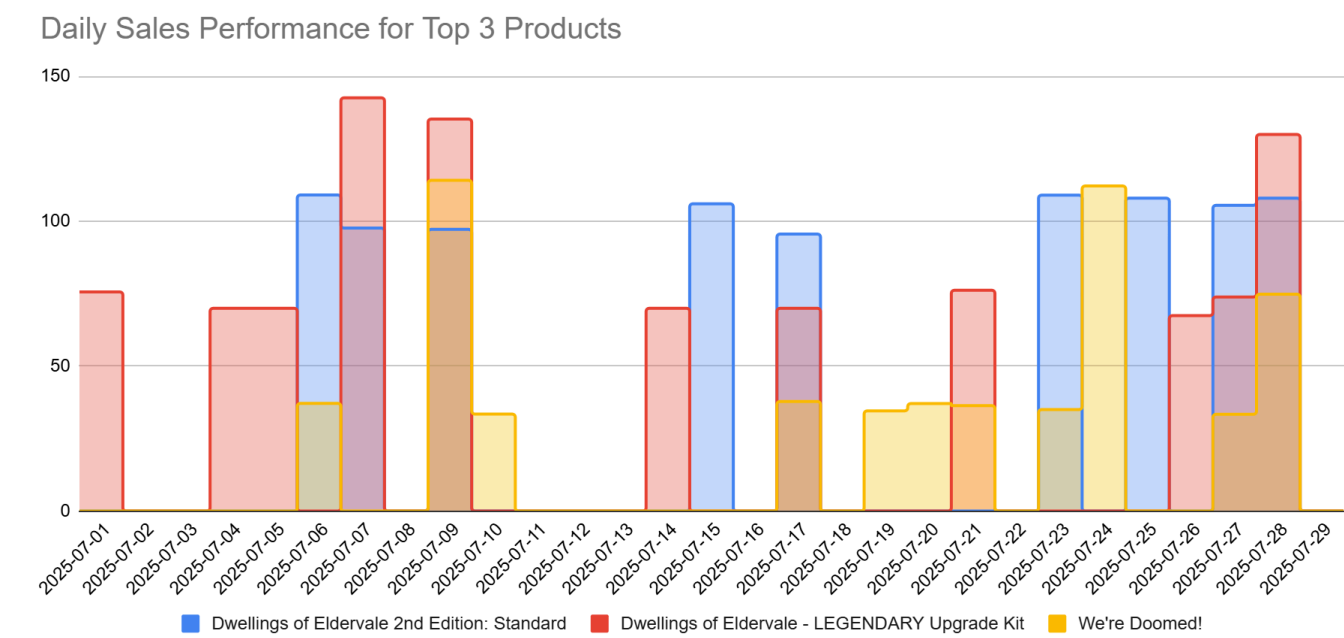

As I observed, the largest purchase items are Dwellings of Eldervale 2nd Edition: Standard, Dwellings of Eldervale - LEGENDARY Upgrade Kit ,Dwellings of Eldervale - DELUXE Upgrade Kit. It reveals this series' products are famous and popular.

Daily Sales and AOV (07-01-25 to 07-29-25)

As I observed this line chart, it reveals July 06, July 07, July 09, July 17, July 27 and July 28. These days have the highest sales and lower AOV. Based on the data, AOV raise and Sales

raise, it reflects it is growing *and* customers are spending more. Some data reflect that fewer people are buying, but those who do are spending more . They should be loyal fans or collectors.

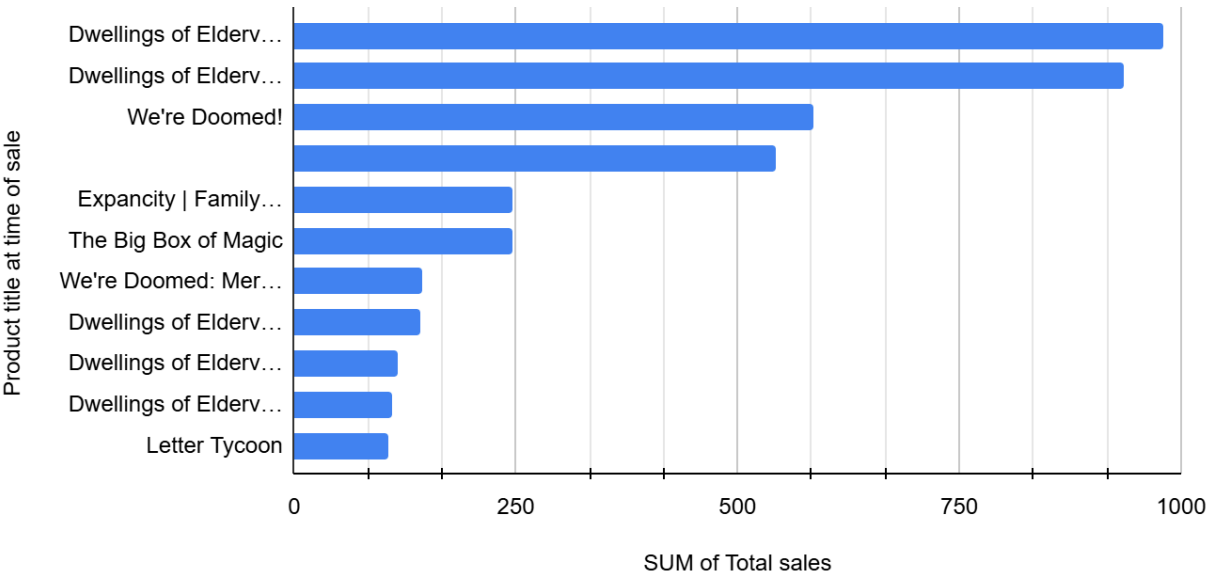

Now this one is Top 3 Products daily sales chart.
It reveals Dwellings of Eldervale - Legendary Upgrade Kit and Dwellings of Eldervale 2nd Edition: Standard are hero products, they drive the large proportion of real sales.

Product title	SUM of Total sales	Average Sales per Item
Dwellings of Eldervale 2nd Edition: Standard	13323.56	103.2834109
Dwellings of Eldervale - LEGENDARY Upgrade Kit	12514.05	71.50885714
Dwellings of Eldervale - DELUXE Upgrade Kit	5014.81	56.34617978
We're Doomed!	3810.47	36.63913462
Dwellings of Eldervale - Wooden Upgrade Treasure and Trove Ti	2586.22	20.36393701

As you can see here, Dwelling of Edervale 2nd Edition:Standard has \$13323.56 total sales, and Dwellings of Eldervale -Legendary upgrade Kit has \$12514.05. It reveals our main sales coming from the dwelling of Edervales series. This series is the hero product of breaking Games.

SUM of Total sales vs. Product title at time of sale

AI-Supported Recommendations

Recommendation	Source / Reasoning	Funnel Stage	Expected Impact	Confidence
Simplify mobile checkout flow (UX, shipping calculation).	98.7% checkout abandonment is the #1 conversion failure; mobile devices drive nearly 2X conversions, suggesting a critical mobile path flaw.	Conversion	Reduce cart abandonment; estimated ~\$1,123/period recovery.	High
Implement UTM tracking immediately across all campaigns.	UTM tracking is a prerequisite for real attribution. Current Meta Ads attribution is view-based, not real sales, skewing results.	Data Integrity / Attribution	Enable reliable attribution for all future analysis and strategy.	High
Prioritize Meta retargeting for the 242 users with billing addresses.	The 242 billing-address users represent the most valuable, high-intent retargeting audience available.	Conversion / Retention	Potential recovery of \$261–\$783.	High
Allocate focused ad budget and creative to the 'Dwellings of Eldervale' series.	'Dwellings of Eldervale' is the hero product, responsible for 73.4% of revenue and the largest proportion of total sales.	Consideration / Conversion	Maximize sales by centering investment on the product with proven highest revenue contribution.	High
